OR,

## URANIA'S MESSENGER.

BEING

A Brief Description and Survey of the Year  
of Humane Redemption. 1677.

	Unto which is Numbred from	years
The Creation.	{ By the Oriental and Greek Christians	7183
	{ By the Jews, Hebrews, and later Rabins	5437
	{ But According to Sacred Writ	5626

Being the first from the Bissextile or Leap Year.

And from { Constitution of the Kalender by Julius Caesar. 1720  
the { Reformation thereof by Pope Gregory. 95

Wherein is contained (besides the state of the Year  
the Solar Ingresses, various Configurations, Eclipses, Con-  
junctions, and Diurnal Motions of the Planets, with the Rising  
Setting and Southing of the Moon, according to the  
method of Mr. Vincent Wing. Also an account of such  
Eclipses that shall happen this year, together with useful Ta-  
bles, and all other Furniture that may conduce to the Com-  
plearing such a Work. Accommodated to the Meridian of Lon-  
don, where the Pole Arctick is Elevated above the Horizon  
51 degr. 32 m. and without sensible Error may serve for any  
part of Great Britain.

To which is added a short discourse of the effects of the  
Planets and Stars.

Note that the time of Sun rising is put in the last Column of the right hand page of the Kalendar for every ten days in each Month, which being subtracted from 12 hours, gives the time of Sun setting.

A Table of the Moons Southing in hours and minutes every day the last six Months of this Year. Very useful for finding the time of High-water, also the true hour and minute of the night by Moon-shine upon a Sun-dial.

June hath XXX Days.

This Month hath highest Sun, and longest days.  
 The *Summer* enters as the day decay's,  
 That which spring whil'st *Sol* to the *Crab* did rise,  
 Ripen's whil'st he unto the *Ballance* flye's.  
*Phæbus* and *Jove's* for Peace, but *Mars* for War,  
 That's the ill nature of that fiery Star.

# AUGUST. 1577.

Full Moon 2 day, 57 min after midnight.

Last quarter 10 day at 3 hours 2 min in the morn

New Moon 18 day, at 7 hours 18 min. in the morn.

First quarter 25 day, at 5 hours 27 min. afternoon.

M. D.	Change of Air.	Prognostications and other Observations.
1	Change of air	3 Day 14 h. 36 m. long. Night 9 h. 24 m.
2	begins the	9 Day 14 h. 12 m. long. Night 9 h. 48 m.
3	month, with	15 Day 13 h. 50 m. long. Night 10 h. 10 m.
4	clouds, rain	21 Day 13 h. 28 m. long. Night 10 h. 32 m.
5	and thun-	27 Day 13 h. 4 m. long. Night 10 h. 56 m.
6	der.	The days approach of great Aitrea's reign,
7		When as the earth unmeasured do remain,
8		When no great weighty Ships had brought
9		from far
10		Heaps of base Goods, news of unlawful War.
11	storms of rain,	When as a little Cottage, homely Cave,
12	hail and	Contented dwellings to the People gave,
13	thunder,	In which they sit, not as they now do, roame
14	winds,	From remote places to bring traffick home.
15	Now good	The servile yoke did not the Bull disturb,
16	weather for	The unbac't Jument knew no bit or curb.
17	5 or 6 days	The dwelling house no door had, but stood ope,
18	Cold, rainy	Nor was the Mark pre fixt that bound the scope
19	hailand	Of common fields, the hollow Oak, the Hive,
20	tempestu-	That yielded Honey; neither did they drive
21	ous weather	Their cattel home, but with their Udders
22	till the 24	swell'd
23	day, from	They flockt unto the Milk-pail uncompell'd.
24	whence till	No wrath, no wars, no Armies to invade,
25	the end of	For then no Smith knew how to cast a blade,
26	the month	In those good times, but the worlds younger days
27	you may ex-	Nation gainst Nation did no forces raise.
28	pect very	A Traitor was unknown, no man for gain
29	good & sea-	Dur'd in a flating Barque to cross the Main.
30	sonable	No craft was known, nor fraud then understood
31	time.	The Udders of their Cattel lent them food.

# September hath XXX Days.

I hope poor *Europe* sees her *Error* now,  
 Feeling the smarts of War, begins to bow  
 Unto sweet peace that seems to court her so.  
 I hope shee's not so mad, to let her go,  
 But take her Offer while't it is in date,  
 For fear she should repent, when 'tis too late.

	month.	

October hath XXXI Days

Here Phæton doth square mild Aphrodite,  
And after with her plays the Hypocrite.  
Grim Chronos spight and malice at her throws.  
Joye finds out *Tisam*, and there deals him blows.  
Whence this shall bear part in my Litany,  
From holy Devils, Lord deliver me.

# Urania's Messenger, 1677.

## Astronomical and Astrological Observations for the Year 1677.

---

### *Of the secret Operations and Effects of the Planets and Stars upon Inferiour Bodies.*

**I**S not the growth of Fame ( as *Horace* speaks very Naturally ) as secret and insensible as that of a Tree ? And are not our minds when we are Children rude and ignorant, yet by Education reduced to knowledge, though the progress we make therein ( or in any kind of learning ) be not computable every day and hour. But after a certain time both the corporeal growth of the Body is perceived ; and the progress which the mind hath made in learning and experience is manifest. Whence it appears that these things are subject to time, which is nothing but an insensible and indivisible progression ( as I may term it ) of minutes whose progress is the measure and number of all motion, so that what at first could not be perceived, is after a while as manifest as Noon-day. This is all the account can be given of the *Stars*, for the effects of the *Stars* and *Planets* are not perfectly perceived, though their motions and influences cease not, seeing they operate insensibly and constantly. And what time seems ( to us ) to bring forth is caused by and must be ascribed to their motions and configurations. The heat and light of the *Sun* which redeems us from so much darkness is generally acknowledged, but the Operations of the rest of the *Planets* are not perceived because they are not all equally hot, nor have that Majesty of light and their qualities differ, but are like Lamps which can neither cast forth any sensible heat nor shed such a light as can enlighten fully those places which they are set in. Moreover as the *Sun* being above the Earth, drives to and fro the Airy gists whereby he heats all things, and by which means he dries some things and melts others, sometimes

C

constrains

## Urania's Messenger, 1677.

constrains and sometimes loosens, he drives away some things and draws others to him; so also the *Stars* and *Planets* by that Spirit which we call the Air do affect those humors whereof we consist by infusing their qualities into them according to their several natures, which being so affected, there are caused those sights which afterwards move our minds and Spirits to think and do according to the nature of the *Star* affecting, and the humour affected; so that not only the constitutions of our Bodies follow those natures and affections, but also our very *Actions* have a representation of them, to which affections when reason becomes either a guide or an assistant, it comes to pass that *man* only can be called a *Rational Creature* who of all Creatures in the World hath the greatest correspondence and sympathy with *Heaven* and the *Stars* which are placed therein.

### A brief Chronological account of some things worthy Note since the Birth of Christ, to this present Year 1677.

Since the Birth of Christ,	1677	Newbury second Fight,	39
Christ suffered upon the Cross,	1644	The fatal Battel at <i>Majesty</i> Just the 14.	34
Rome burnt by the Command of Nero,	1613	The Bishop of <i>Canterbury</i> beheaded,	32
England first Received the Christ. Faith,	1540	King <i>Charles</i> the I. was Murdered.	29
Scotland first Received the Christ. Faith,	1474	Duke <i>Hamilton</i> , Lord <i>Capel</i> , and <i>Earl</i> of	29
The Tower of <i>London</i> built,	1108	<i>Holland</i> were beheaded,	
<i>Cambridge</i> was made a University,	1043	<i>Worcester</i> Fight, Sept. 3.	26

# Urania's Messenger, 1677.

Of the four Quarters of the Year, and first of the Spring.

**E**quinotium Vernalis, or the Spring Quarter, takes it beginning when Royal Sol enters the Equinoctial Sign *Aries*; which falls this Year *March* the 9. day 9. h. 27. min. afternoon, Equalizing both day and night all the World over (except under the *Poles*). This is the most pleasant season of all the Year, because all things now grow green and flourish, now the Chilified Roots of *Herbs* and Plants are quickened, and their vegetable life produced, the natural temper of this Quarter is generally hot and moist, but if it happen otherwise, 'tis unwholesom for mankind; the *Melancholy* constitution is now least afflicted with diseases, and the *Sanguine* most obnoxious thereunto, therefore let such persons endeavour to preserve their health in time. In the next place I shall present the Scheme of the Heavens at the Suns ingress into *Aries*, Calculated (as to the time thereof) from the *Rudolphin Tables* now Printed with my *Clavis Astrologiæ Elimata*.

141. 45.

*Judgment Astrological deduced from the Scheme of the Sans Ingress into the Equinoctial Sign Aries.*

IN this *Uraal figure* we have the Cæstelial Sign *Scorpio* ascending, concerning which there hath lately been great dispute among Artists, and now 'tis come to this Result that *Scorpio* is not only a Sign of falsity, but the most *erroneous* Sign of all the twelve, being some years since acknowledged to be so, by a Professor of *Astrology* amongst us, (that looks upon himself to be far better acquainted with the nature of *cæstelial Influences* than the rest of his Brethren;) Let the Gentleman enjoy his opinion, but for the future forbear further contests with any of them, and indeavour rather to repair his reputation in which he hath lately made so considerable a breach; as hath been sufficiently evinc'd in Print. But I proceed to my Astrological Judgment upon the Scheme (and therein for once shall imitate the part of a *common Prognosticator*) 1. I shall begin at the *Ascendant* or *First House*, which (in a *Revolutorial Figure* of the World) signifies the *Common people* or general state of the *Country* or *Nation* for which 'twas set, and finding no *Planet* therein, but favourably beheld by the *Trine Aspects* of *Mars* and *Venus* (who also behold each other by a *Trine*) I therefore conclude the condition of the common people to be good and fortunate this year, and that they should live peaceably in the general and in moderate health and friendship one with another; But in regard *Scorpio* is upon the *Ascendant* (*viz. signum falsitatis*) and *Mars* Lord thereof in *Cancer* directedly placed in his *fall*, this Judgment cannot fully take place, for some *Treachery* or unworthy *militious Acts* there will be more or less undoubtedly amongst persons of both Sex. 2. From the *Second House* and Lord thereof Judgment is usually drawn concerning the substance or support of a *Kingdom* or *Nation*, and in the Scheme finding the *Dragons Head* in the *Second* and the *Evencolent Planet Jupiter* Ruler in *Aquary* a humane Sign, also the *Moon* hastening to his *Trine*, this prenotes (or naturally signifies) the happy and prosperous condition of this Kingdom, *viz.* That the people thereof in general (and some neighbouring Nations)

## Urania's Messenger, 1677.

shall not only enjoy peace, but plenty also, which is as much happiness as can reasonably be expected or desired, yet considering the Disposer of *Jupiter*, viz. *Saturn* beholds him by a *Quadrat Aspect* from fixed signs and the *Moon* in *Square* to *Mars* also, I conclude may persons will notwithstanding repine and torment themselves for some few accidental and inconsiderate losses which may casually happen unto them, but very rarely such as many totally ruine or undo them, and therefore I presume we shall not so frequently hear of the failing or breaking of so many (supposed able men) this Revolution as in some late years. 3. From the *Third House* or *Marston* of a *Figure*, *Astrologers* pronounce Judgment, of Brethren, Sisters, Inland-Journies, Messengers, Letters, Neighbours, Removals, &c. And in this Scheme the *Tropical Sign Capricorn* is Ascending upon the Cusp of the *Third House*, and *Saturn* Lord thereof in *Taurus* in the *Seventh House* near the *Pleiades*; to which may be added the *Malignant Opposition* of *Mars* to the Cusp of the *Third*; these are arguments that not only many *Satyricall Epistles* or *Libels* may be written and dispers'd, this year, but people will too frequently remove their Habitations to their prejudice and detriment, it also portends that their short and Inland-journies may prove unsuccessful, and Neighbours and Relations should unhappily injure one another, though not considerably, for this Judgment is meliorated by the friendly *Sextile* of *Venus* to the Cusp of the third House. 4. From the *Fourth House* (or *North Angle*) Judgment is taken concerning the period of all our actions, and many other things, as you may read at large in my *Clavis Astrologiae Elimata* lately published (to which I refer the reader that delights in *Astrological Speculations*) Now finding *Jupiter* posited so near the Cusp of the fourth in good Aspect to the *Moon*, and *Venus* and *Mercury* in the fourth beholding the *Ascendant* by a friendly *Trine*. Hence I may rationally conclude that the general affairs of this year may end well, and such persons that are Masters of *Houses* or *Lands* or both should (for the most part) this year be very successful therein (unless they labour under some malevolent *Directions* in their Nativities) The honest laborious *Countray man* and *Farmer* may now expect very hopeful Crops

## Urania's Messenger, 1677.

Crops of Corn and other grain (unless strangely contradicted by some Superiour or Occult cause in Nature) and receive much benefit thereby, to recompence his great pains and industry, and generally the end of all just and honest indeavours should terminate happily to the great content and satisfaction of the Agents. 5. From the *Fifth House* Authors consider all kind of pleasures and delights, hence we judge the Condition of Children and all younger Relations, also of *Messengers, Agents, Embassadors, &c.* Now finding *Jupiter* and *Venus*, (both the fortunes) Ruling this *Mansion* (or part of Heaven) and the *Moon* applying to the *Trine* of *Jupiter*, also *Pisces* a fruitful sign upon the Cusp of the fifth, and *Venus* posited there in her own dignity of exaltation, these are notable arguments that give us great hopes that Women this year should be very fruitful and happy in Childbirth, the people in general will delight to take pleasure, and recreate themselves with all kind of honest pastime; now several welcom *Embassadors* arrive in our Nation, and able *Agents* are imployed in publique affairs who bravely discharge their trust with much fidelity, to their exceeding commendation and honour, the position also promises great probability of a good Trade to most *Taverns, Alehouses, Gaming-Houses, &c.* And in fine a most pleasant and delightful year to the people in general. 6. From the *Sixth House* we judge of the *Diseases* of the year, of *small Cattel*, and of the fidelity or falsity of *Servants, &c.* And finding *Mars* Ruler of the Sixth House in *Cancer* in Quartile to the *Luminaries*, this portends dangerous diseases proceeding from choler and the corruption of *Blood*, probably *Surfeits, Feavours, Small Pox, Measles, &c.* But yet not more violent then in former years, nor such distempers which may non-plus the ordinary professor of *Physick*, or puzzle the learned and able Doctor, for *Mars* beholds *Venus*, and the *Ascendant* by a *Trine Aspect* and being posited in *Cancer* the watry Trigon, which is attributed to him for his *Triplcity*, he receives a far greater debility therein, and 'tis a Sign contrary to his own nature, and therefore he is there less powerful or able to inflict his evil influence upon

upon mortals——By what hath been said, small Cattel should thrive and increase moderately well, only sheep should be something subject to the Rot or some other disease Equivolent, and Servants should this year very rarely perform their duties with that justness as they ought, but will be more or less subject to extravagancy and idleness, &c. 7. From the *Seventh House* Judgment is drawn, concerning Marriages, Law Suits, publique Enemies, &c. Now the Position of *Saturn* therein with the *Pleiades*, and in *Quartile* to *Jupiter*, I must confess is no way favourable, but considering also that *Venus* (who is potent in the *Scheme*) doth dispose of *Saturn*, and she in *Trine* to *Mars* Lord of the Ascendant, this shews no danger of Opposition from a publique Enemy this year, but rather intimates (in *Starry Dialect*) that there are a discontented party that lie Dormant, but dare not vend their malice, or make publique opposition thereby to disturb or molest our flourishing *Island*, but rather menaces some place abroad, with some Insurrection or secret plot contrived against them; we may 'tis true have many tedious Law Suits, and other contentions arise amongst us, as also frequent Curtain Lectures or Nuptial Broils, high differences between men and their wives, chiefly arising from jealousy and other unhappy discontents, and therefore those Marriages that are celebrated this year, 'tis to be feared may not prove so favourable (many of them) as might be wished; as for *Thieves* and *Robbers* and such as frequently go upon the *Pad*, we may expect to hear of strange exploits acted by such desperate Agents, and they will assuredly receive their due reward by the hand of Justice. 8. From the *Eighth House* Judgment is deduced concerning Mortality, &c. *Mercury* is Ruler of the House of Death, and he very dejectedly placed in the fourth in his *Fall* and *Ditrimment*, and *Retrograde* also; *Guido Bonatus* tells us if the Lord of the *Eighth* be strong and fortunate, there is no great danger of *Mortality*, but here on the contrary he is sufficiently weak and debilitated, and the *Dragons Tail* is also in the *Eighth*, and therefore there is the more danger of *Mortality*, or that a greater number of people should

## Urania's Messenger, 1677.

should expire this year then ordinary, but this Judgment is something mitigated, in respect *Mercury* beholds both the *Ascendant* and Lord thereof by a *Trine Aspect*, yet let such as are concern'd in *Legacies* or *Portions*, look well to their business least they repent too late.

9. From the *Ninth House* of the *Scheme*, Judgment is taken concerning the *Law*, *Religion*, *Long Voyages*, &c. In the *Yernal Figure* the *Moon* is Governess of the *Ninth House*, and applying to the *Trine* of *Jupiter* (as I have before intimated) but she is also in *Square* to *Mars* in the *Ninth* from *Cardinal Signs*, which shews prejudice and considerable damage to the Merchant in his adventures to Sea, but yet hopeful returns may nevertheless be expected because the fury of *Mars* is in part corrected by the *Trine Aspect* of *Venus* the lesser fortune, and both behold the *Ascendant* by a Benevolent *Trine* also; moreover *Mars* being Lord of the *Ascendant* and posited in the *Ninth* gives greater hopes, that notwithstanding some accidental injury or losses may be sustained, yet the returns and advantage thereby, shall far exceed the loss, which is some encouragement in the midst of dangers, and what is said in this case may be applied also to *Ecclesiastical affairs*.

10. The *Tenth House* hath signification of *Kings*, *Princes*, *Rulers*, &c. *Royal Sol* in this Revolution is chief Ruler of the *Mid-Heaven* or Angel of Honour, he is just entering his exaltation, and a Noble *Royal Star* Culminates (viz. *Cor Leonis*) These are arguments of much happiness, grandeur and splendor, that such persons (very aptly signified by the *Sun* who is *Rex plantarum*) shall enjoy this year, to the honour of their Subjects, and the terror of their Enemies: 'tis true that *Mars* in the *Ninth House* (which is the *Twelfth* from the *Tenth*) is in *Square* to the *Sun*, and plainly signifies that even *Kings* and *Princes* have their private Enemies (and sometimes amongst those of their own Subjects) as well as publique, but in regard *Mars* is weak and dejected, and the *Sun* so powerful, therefore such private Enemies will not attempt to spit their venom, but must of necessity remain quiet and dare not appear, lest the hand of Justice too suddenly

## Urania's Messenger, 1677.

suddenly lay hold upon them. 11. From the *Eleventh House*, Judgment is deduced concerning the Treasure, Wealth of *Kings*, as also the hopes and assistance of a *Person* or *Nation*, &c. *Mercury* I acknowledg is weak and debilitated, he is Lord or Ruler of the *Eleventh House*, and is a proper significator of these matters or things, who of himself promiseth little or no assistance, but let it also be considered that *Mercury* and *Venus* apply to a *Conjunction*, the *Moon* is in the *Eleventh* disposed of by *Venus* and applyeth to the *Trine* of *Jupiter* who is in a fixed Sign near the *Fourth House*; whence it may rationally be gathered that upon all occasions there may be sufficient supplies both of treasure and assistance provided almost beyond expectation. 12. From the *Twelfth House* is discovered *Astrologically* the private enemies of a *Person* or *Nation*, and in our *Figure Venus* being Lady of the *Twelfth*, and in *Trine*, both to the Ascendant and Lord thereof, what need we then to fear the least prejudice, from such, when there doth not appear the least danger? And thus I have briefly run over the whole *Figure*, which may be acceptable to some, and rejected by others, as impertinent; but I look upon a *Revolutional Figure* of the *Suns Ingress* to be the same with a *Figure* of a *Nativity* for a year, and it ought therefore to be expounded after the same method, since man, who is not improperly compared to a little World (viz. *Microcosme*) is the *Epitome* of the great World (viz. *Macrocosme*).

### Of Summer.

*Solstitium Aestivum*, or the Summer Quarter this year takes beginning with us, upon *Sunday June* the 10. at 24. min. past midnight, causing longest days to all people on this side the *Aequator*. This Quarter is naturally hot and dry, the *Phlegmatick* constitution is best in health now, but the *Choleric* the contrary.

## Urania's Messenger, 1677.

### Of Autumn, or Harvest.

**E**quinoctium Autumnale, or the Autumnal Quarter begins this year upon Wednesday, September the 12. at 2. min. past 4. in the afternoon, making the days and nights equal as in the *Spring Quarter*. This season is by nature cold and dry, and therefore those of a *Sanguine* constitution are best in health, but *Melancholy* persons are very subject to diseases this Quarter, and therefore they ought to consult the learned and able *Physician* in time.

### Of the Winter Quarter.

**S**olstitium Hyemale, or the Winter Quarter, begins upon Tuesday, December the 11. at 29. min. after 3. in the morning thereby producing our longest day and shortest night; the natural temper of this Quarter is cold and moist, and at this season of the year, is *Choleric* persons and youth do best enjoy their health, but ancient persons and those of *Phlegmatick* constitutions are now very subject to be afflicted by the Malignancy of Diseases; proceeding from ill and vitious humours, which ought to be purged off the Spring following, if they intend to preserve themselves in health.

### Of the Eclipses that will happen this present Year, 1677.

**T**HERE are this Year four Eclipses of the *Luminaries*, viz. two of the *Sun*, and as many of the *Moon*; but only one Eclipse of the *Sun*, and some part of one of the *Moon* will be visible in our *Horizon*, if Clouds interpose not.

The first Eclipse of the *Sun* falls May the 21. and the middle time thereof at 27. min. past 10. in the morning, and will be visible to us if the Air be clear, it falls in 10. deg. of *Gemini*, the Ascendant of the famous City of London, ( which I pray God preserve from future fires ) *Proclus* tells us that an Eclipse of the *Sun* in the first decade of *Gemini*, imports or stirs up Disensions, Strifes, and Seditions amongst *clergy-men* and all manner of *Mix-*  
chants

## Urania's Messenger, 1677.

*chants and Mechanicks*, of every Order, deadly hatred, contempt of Laws, neglect of Piety and holy duties, with breach of Covenant do also follow. This *Eclipse* will be visible at *St. Helens*, *St. Mary Madagascar*, *St. Martins Mauritania*, &c.

The second *Eclipse* of the *Sun* happens upon the 14. of *November*, and the middle time thereof at 15. min. past 11. at night, and therefore not visible to us, but it may be seen in *China*, *Japan*, *South Sea*, *America*, *new Granada*, *St. Thomas*, *new Spain*, &c.

The first *Eclipse* of the *Moon* falls on *May* the 7. the middle time thereof at 3 h. 34. in the morning, and some part thereof may be seen with us before *Sun* rising, it will be visible at *Brasil*, *St. Laurence*, *Poland*, *Iceland*, *new Spain*, *Norway*, *Cape of good Hope*, *Barbary*, *Friesland*, *north-America*, &c.

The second *Eclipse* of the *Moon* falls *October* the 30. and the middle time thereof at 10 h. 55. min. not visible in our *Hemisphere*, but it may be seen in *Magellanica Island*, *new France*, *Florida*, *Cuba*, *East Sea*, *Malabar*, the *Caspian Sea*, &c. *Eclipses Luminarium super Civitates, provincias & Regna magis quam super privata conditionis homines aut etiam super Reges, Respiciunt enim multitudinem. Cardan Seg. 5. Aph. 45. i. e.* *Eclipses of the Luminaries have signification or operate by their influence more forcibly upon Cities, Provinces, and Kingdoms, then upon men of private condition, or even upon Kings, and Princes, for their effects have generally Relation or rather respect the multitude or many people.*

*To find High water in most Coasts of England, &c. As also upon what points of the Compass it floweth in any of those Coasts.*

First find what hour the *Moon* will be South by a Table for that purpose at the beginning of the *Almanack*, by entring with the day of the Month in the first left hand Column, and the Month at top, and in the angle of meeting you have the hour and minute of the *Moons* *Southing*, either in the morning or after-noon, and so

## Crania's Messenger, 1677.

so upon the first day of *January* you will find the *Moons* Southing at 6 h. 32. m. in the after-noon, and at that time you may truly conclude it is high water at *Southampton*, *Quinborough*, and *Portsmouth*, for there the South and North *Moons* makes high water.

But if you desire the time thereof in any other Coast about this *Kingdom*, then enter the ensuing Table with the name of the place, and see how many hours and minutes appertain thereunto under H. M. which if added to the time of the *Moons* Southing, you have the time of high water desired, and for the Readers further satisfaction, there is also added the points of the Compass, the *Moon* must be on to make a full Sea for any of those places in the Table.

### Advertisement.

**P**ractical Physick, or five distinct Treatises of the most pre-dominate diseases of these times, the first of the *Scarvey*, the second of the *Dropsy*, the third of *Favours* and *Agues* of all sorts, the fourth of the *French Pox*, the fifth of the *Gout*. Wherein the Nature, Causes, Symptoms, various methods of Cure, and ways of preventing the said diseases are distinctly handled; written in Latin by the famous Dr. Dan. Sennertus, and now made English by H. Care Student in Physick and Astrology, and sold by William Whitwood at the Bell in Duck-Lane.

## Urania's Messenger, 1677.

### *An Example of the use of the Tyde-Table.*

**T**HE first day of *January* it is required to know *fall Sea* at *Gravesend*: By the Table of the *Moons Southings*, I find as before, the *Moon* is South at 32. min. past 6. after-noon, then in the *Tyde-Table* against *Gravesend*, I find 1. h. 30. min. which added to the *Moons Southings* gives 8. h. 2. min. at night the time of *High water* or *Full Sea* at *Gravesend*, *Romney*, *Ramkins*, the like understand of any other; and here take notice that the *Sea* will flow more by one point of the *Compass* in the *Spring-Tydes* then in any of the *Quarters* of the *Moon*, which are called *Nrap-tydes* in any River that hath any indraught, and is of some reasonable distance from the *Sea*, so likewise *Winds*, *Land-Floods*, the *Latitude* of the *Moon* or her *Aspect* to *Venus* in moist signs, or to *Saturn* or *Mars* in dry *Signs*, may anticipate or protract, increase or diminish; as sometimes has been seen when the *Floor* of *Westminster-Hall* hath been all over-flown.

### *A short discourse of the Heavens, and Stars, and their Effects, &c.*

**T**Here is in *man* a natural Covetousness of knowledge derived unto him from the *Heavens*, by the motion whereof men are begotten, and all things in their times and turns are generated and corrupted. For *man* when he is born can not immediately exercise those members which nature hath ordained for the defence of the Body, and the execution of his necessary and natural Actions; but they must expect perfection in time, that so they may be fitted for those offices they are ordained for, as may be said of the feet, the hands, the tongue; such is the consideration of those things which are necessary to the attaining of any science, there is therefore some space of time required that the understanding which is subsequent to the mind, may first be informed; and the information of the understanding proceeds from the senses of the Body, for tasting discerns tastes, the sight

## Urania's Messenger, 1677.

fight Colours, smelling Odours, and hearing Sounds, &c. Now the understanding represents inatters to the mind, some as things of reason, and some as things only of conjecture; which though they are not certain and of necessary consequence, do seldom make custom a lier. The knowledge therefore of the *Heavens* and the *Stars*, is partly *Rational* and partly *Conjectural*; that part is *Rational* which is called *Astronomy*, because it is led by the knowledge and certainty of Motions, Times, and Numbers. That part also which is called *Astrology*, is partly *Rational*, because it recedes not far from Nature and Natural things, for when an *Astrologer* concludes that *Saturn* or *Mars* introduces a Pestilence, is there any more said then that by his motion he corrupts the humours of the Body and the Air, and so consequently infects the Blood and the whole constitution, from which infection, a Pestilence must naturally follow: And it is also partly *Conjectural*, as when an *Astrologer* says that *Mars* portends War, for these inferiour causes; especially those of any relation to men, are not always subject to the *Celestial causes*, but are sometimes more powerful according as the Wills and Consultations of those which are to manage the War are altered by them, wherefore in some significations and predictions, reason bears the sway, in others Conjecture rather. It has also been observed that it naturally happens after the revolution of many years, something new shall be produced which afterward is obliterated through ancient time, and yet after this, comes to be known again: And thus it falls with the secrets of the *Stars*, which were first observed by an impulse more then humane, and yet perhaps there is more knowledge of them reserved to future Ages. Now when men by observation were well assured that the same motion of the *Stars* caused the same effects, and that many things present differed not from things past, and had the same reason, they knew to what motion, or to what *Planet* or *Fixed Star* to attribute the proper and certain signification; and as the *Poets* have given names to men according to their virtues and vices; so are the *Signs* and *Stars* called by divers, and yet proper

proper names to them, taken from living Creatures or other things which giveth the greatest signification of their properties, and which do as it were by some *Image* represent their operations, both in the constitution of Bodies, and disposition of the minds of men.
